Desiring TESOL and International Education - Raqib Chowdhury 2014-01-22

This book addresses how Western universities have constructed themselves as global providers of education, and are driven to be globally competitive. It examines how the term 'international' has been

exploited by the market in the form of government educational policies and agencies, host institutions, academia and the mass media. The book explores matters relating to the role of the English language in international education in general and the field of TESOL in particular. It demonstrates how English and TESOL have exercised their symbolic power, coupled with the desire for international education, to create convenient identities for international TESOL students. It also discusses the complexity surrounding and informing these students' painful yet sophisticated appropriation of and resistance to the convenient labels they are subjected to.

Trends in Control and Measurement Education - D.P. Atherton
2014-06-28

This volume is the published Proceedings of selected papers from the IFAC Symposium, Swansea, 11-13 July 1988, where a forum was provided for discussion of the latest advances and techniques in the education of control and instrument engineers. Seven major topics were covered to aid lecturers in understanding, developing and presenting systems engineering - control and measurement - as a subject to

undergraduate and postgraduate students. The teaching of real-time computer control as a topic and laboratory experiments for both continuous and discrete systems were discussed, as was process control, with the emphasis on providing the student with engineering experience by using scaled-down equipment which would teach practical skills. Included in the Proceedings are papers on measurement and instrumentation, an area felt to be neglected within academic instruction. The development of software tools for systems design within systems engineering was included, as was the exchange of teaching packages and methods between academics, and the education curriculum of systems engineering within developing countries. These Proceedings will prove to be a useful up-to-date guide and reference source for all lecturers and professors involved in curriculum development and the teaching of control and measurement in systems engineering.
