Nature and Nurture - Cynthia Garcia Coll 2014-04-04

What does it mean to find a gene or set of genes that are associated with ADHD, schizophrenia, or autism? Could we eradicate such diseases from our species through gene therapy? Is it possible to eradicate from our genome the genetic material that predisposes us to be too aggressive, too shy,

less intelligent, or not active enough? Who has the political power and/or moral authority to make these decisions? The premise of Nature and Nurture is that the complexity of the transactions between nature and nurture--between genes and the environment from the cellular to the cultural level--make these questions incredibly complex and

in need of careful attention by educators, scientists, the public, and policymakers. A product of the conference held at Brown University in 2001, this book suggests that genes and environments work together interactively in a complex and closely intertwined fashion. The contributors to this book--biologists, psychologists, psychiatrists, and economists--present knowledge that enables research and application to transcend the traditional question of whatever variance or significance is attributed to genetics versus environment in the development of a particular behavioral trait. This book presents a variety of views on the current status of knowledge about the ways in which dynamic, developmental, mutually interactive systems in the genetic and environmental domains operate. The chapters represent contributions from different perspectives.

Outdoor Kids in an Inside World

- Steven Rinella 2022-05-03

NEW YORK TIMES

BESTSELLER • “An imperative call to action” (Nick Offerman) to get children off their screens and into nature, with tips for bonding activities that teach the importance of outside time and build tough, curious, competent kids—from the New York Times bestselling author and host of the TV series and podcast MeatEater “A revelation for families struggling to get kids to GO OUTSIDE, or to just stop using the darn smartphone.”—Michaelen Doucleff, PhD, New York Times bestselling author of Hunt, Gather, Parent In the era of screens and devices, the average American spends 90 percent of their time indoors, and children are no exception. Not only does this phenomenon have consequences for kids’ physical and mental health, it jeopardizes their ability to understand and engage with anything beyond

the built environment.

Thankfully, with the right mind-set, families can find beauty, meaning, and connection in a life lived outdoors. Here, outdoors expert Steven Rinella shares the parenting wisdom he has garnered as a father whose family has lived amid the biggest cities and wildest corners of America. Throughout, he offers practical advice for getting kids radically engaged with nature in a muddy, thrilling, hands-on way, with the ultimate goal of helping them see their own place within the natural ecosystem. No matter their location—rural, suburban, or urban—caregivers and kids will bond over activities such as: • Camping to conquer fears, build tolerance for dirt and discomfort, and savor the timeless pleasure of swapping stories around a campfire. • Growing a vegetable garden to develop a capacity to nurture and an appreciation for hard work. • Fishing local lakes and rivers to

learn the value of patience while grappling with the possibility of failure. • Hunting for sustainably managed wild game to face the realities of life, death, and what it really takes to obtain our food. Living an outdoor lifestyle fosters in kids an insatiable curiosity about the world around them, confidence and self-sufficiency, and, most important, a lifelong sense of stewardship of the natural world. This book helps families connect with nature—and one another—as a joyful part of everyday life.

L.M. Montgomery and the Matter of Nature(s) - Rita Bode

2018-04-30

L.M. Montgomery's writings are replete with enchanting yet subtle and fluid depictions of nature that convey her intense appreciation for the natural world. At a time of ecological crises, intensifying environmental anxiety, and burgeoning eco-critical

perspectives, L.M. Montgomery and the Matter of Nature(s) repositions the Canadian author's relationship to nature in terms of current environmental criticism across several disciplines, introducing a fresh approach to her life and work. Drawing on a wide range of Montgomery's novels as well as her journals, this collection suggests that socio-ecological relationships encompass ideas of reciprocity, affiliation, autonomy, and the capacity for transformation in both the human and more-than-human worlds, and that these ideas are integral to Montgomery's vision and her literary legacy. Framed by the twin themes of materiality and interrelationships, essays by scholars of literature, law, animal studies, anthropology, and ecology examine place, embodiment, and difference in Montgomery's works and embrace the multiplicities embedded in the concept of nature. Through

innovative critical approaches, L.M. Montgomery and the Matter of Nature(s) opens up conversations about humans' interactions with nature and the material environment.

The Architecture of Happiness - Alain De Botton 2010-12-03

Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel, and how we could build dwellings in which we would stand a better chance of happiness. In this witty, erudite look at how we shape, and are shaped by, our surroundings, Alain de Botton applies Stendhal's motto that "Beauty is the promise of happiness" to the spaces we inhabit daily. Why should we pay attention to what

architecture has to say to us? de Botton asks provocatively. With his trademark lucidity and humour, de Botton traces how human needs and desires have been served by styles of architecture, from stately Classical to minimalist Modern, arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks. On an individual level, de Botton has deep sympathy for our need to see our selves reflected in our surroundings; he demonstrates with great wisdom how buildings — just like friends — can serve as guardians of our identity. Worrying about the shape of our sofa or the colour of our walls might seem self-indulgent, but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight. When shopping for furniture or remodelling the kitchen, we don't just consider functionality

but also the major questions of aesthetics and the philosophy of art: What is beauty? Can beautiful surroundings make us good? Can beauty bring happiness? The buildings we find beautiful, de Botton concludes, are those that represent our ideas of a meaningful life. The Architecture of Happiness marks a return to what Alain does best — taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject. As he did with Proust, philosophy, and travel, now he does with architecture.

100-houses-nature-and-nurture

Galvin seemed to be living the American dream. After World War II, Don's work with the Air Force brought them to Colorado, where their twelve children perfectly spanned the baby boom: the oldest born in 1945, the youngest in 1965. In those years, there was an established script for a family like the Galvins-- aspiration, hard work, upward mobility, domestic harmony--and they worked hard to play their parts. But behind the scenes was a different story: psychological breakdown, sudden shocking violence, hidden abuse. By the mid-1970s, six of the ten Galvin boys, one after another, were diagnosed as schizophrenic. How could all this happen to one family? What took place inside the house on Hidden Valley Road was so extraordinary that the Galvins became one of the first families to be studied by the National Institute of Mental Health. Their story offers a shadow history of the science of

schizophrenia, from the era of institutionalization, lobotomy, and the schizophrenogenic mother to the search for genetic markers for the disease, always amid profound disagreements about the nature of the illness itself. And unbeknownst to the Galvins, samples of their DNA informed decades of genetic research that continues today, offering paths to treatment, prediction, and even eradication of the disease for future generations. With clarity and compassion, bestselling and award-winning author Robert Kolker uncovers one family's unforgettable legacy of suffering, love, and hope.

Nurturing Dreams - Fumihiko Maki 2012-09-21

Unavailable as a collection until now, these essays document both the intellectual journey of one of the world's leading architects and a critical period in the evolution of architectural thought. Born in Tokyo, educated in Japan and the United States, and principal of an internationally acclaimed architectural practice, celebrated architect Fumihiko Maki brings to his writings on architecture a perspective that is both global and uniquely Japanese. Influenced by post-Bauhaus internationalism,

sympathetic to the radical urban architectural vision of Team X, and a participant in the avant-garde movement Metabolism, Maki has been at the forefront of his profession for decades. This collection of essays documents the evolution of architectural modernism and Maki's own fifty-year intellectual journey during a critical period of architectural and urban history. Maki's treatment of his two overarching themes—the contemporary city and modernist architecture—demonstrates strong (and sometimes unexpected) linkages between urban theory and architectural practice. Images and commentary on three of Maki's own works demonstrate the connection between his writing and his designs. Moving through the successive waves of modernism, postmodernism, neomodernism, and other isms, these essays reflect how several generations of architectural thought and

expression have been resolved within one career.

Rewire Your Brain - John B. Arden 2010-03-22

How to rewire your brain to improve virtually every aspect of your life—based on the latest research in neuroscience and psychology on neuroplasticity and evidence-based practices. Not long ago, it was thought that the brain you were born with was the brain you would die with, and that the brain cells you had at birth were the most you would ever possess. Your brain was thought to be “hardwired” to function in predetermined ways. It turns out that's not true. Your brain is not hardwired, it's "softwired" by experience. This book shows you how you can rewire parts of the brain to feel more positive about your life, remain calm during stressful times, and improve your social relationships. Written by a leader in the field of Brain-Based Therapy, it teaches you how to

activate the parts of your brain that have been underactivated and calm down those areas that have been hyperactivated so that you feel positive about your life and remain calm during stressful times. You will also learn to improve your memory, boost your mood, have better relationships, and get a good night sleep. Reveals how cutting-edge developments in neuroscience, and evidence-based practices can be used to improve your everyday life Other titles by Dr. Arden include: Brain-Based Therapy-Adult, Brain-Based Therapy-Child, Improving Your Memory For Dummies and Heal Your Anxiety Workbook Dr. Arden is a leader in integrating the new developments in neuroscience with psychotherapy and Director of Training in Mental Health for Kaiser Permanente for the Northern California Region Explaining exciting new developments in neuroscience

and their applications to daily living, **Rewire Your Brain** will guide you through the process of changing your brain so you can change your life and be free of self-imposed limitations.

Finding the Mother Tree -

Suzanne Simard 2021-05-04

NEW YORK TIMES BEST SELLER • From the world's

leading forest ecologist who forever changed how people view trees and their connections to one another and to other living things in the forest—a moving, deeply personal journey of discovery Suzanne Simard is a pioneer on the frontier of plant communication and intelligence; her TED talks have been viewed

by more than 10 million people worldwide. In this, her first book, now available in paperback, Simard brings us into her world, the intimate world of the trees, in which she brilliantly illuminates the fascinating and vital truths--that trees are not simply the source of timber or pulp, but are a complicated, interdependent circle of life; that forests are social, cooperative creatures connected through underground networks by which trees communicate their vitality and vulnerabilities with communal lives not that different from our own. Simard writes--in inspiring, illuminating, and accessible ways—how trees, living side by side for hundreds of years, have evolved, how they learn and adapt their behaviors, recognize neighbors, compete and cooperate with one another with sophistication, characteristics ascribed to human intelligence, traits that are the essence of civil societies--and at the center of it

all, the Mother Trees: the mysterious, powerful forces that connect and sustain the others that surround them. And Simard writes of her own life, born and raised into a logging world in the rainforests of British Columbia, of her days as a child spent cataloging the trees from the forest and how she came to love and respect them. And as she writes of her scientific quest, she writes of her own journey, making us understand how deeply human scientific inquiry exists beyond data and technology, that it is about understanding who we are and our place in the world.

Nonfiction Finalist • PEN/Jean Stein Book Award Longlist • Kirkus Prize Finalist “As we go about our daily lives, caste is the wordless usher in a darkened theater, flashlight cast down in the aisles, guiding us to our assigned seats for a performance. The hierarchy of caste is not about feelings or morality. It is about power—which groups have it and which do not.” In this brilliant book, Isabel Wilkerson gives us a masterful portrait of an unseen phenomenon in America as she explores, through an immersive, deeply researched, and beautifully written narrative and stories about real people, how America today and throughout its history has been shaped by a hidden caste system, a rigid hierarchy of human rankings. Beyond race, class, or other factors, there is a powerful caste system that influences people’s lives and behavior and the nation’s fate. Linking the caste systems of America, India, and

Nazi Germany, Wilkerson explores eight pillars that underlie caste systems across civilizations, including divine will, bloodlines, stigma, and more. Using riveting stories about people—including Martin Luther King, Jr., baseball’s Satchel Paige, a single father and his toddler son, Wilkerson herself, and many others—she shows the ways that the insidious undertow of caste is experienced every day. She documents how the Nazis studied the racial systems in America to plan their outcasting of the Jews; she discusses why the cruel logic of caste requires that there be a bottom rung for those in the middle to measure themselves against; she writes about the surprising health costs of caste, in depression and life expectancy, and the effects of this hierarchy on our culture and politics. Finally, she points forward to ways America can move beyond the artificial and destructive

separations of human divisions, toward hope in our common humanity. Original and revealing, *Caste: The Origins of Our Discontents* is an eye-opening story of people and history, and a reexamination of what lies under the surface of ordinary lives and of American life today.

The Nature-Nurture Debates - Dale Goldhaber 2012-07-09

How is it possible that in more than one hundred years, the nature-nurture debate has not come to a satisfactory resolution? The problem, Dale Goldhaber argues, lies not with the proposed answers, but with the question itself. In *The Nature-Nurture Debate*, Goldhaber reviews the four major perspectives on the issue - behavior genetics, environment, evolutionary psychology and developmental systems theory - and shows that

the classic, reductionist strategies (behavior genetics and environmental approaches) are incapable of resolving the issue because they each offer a false perspective on the process of human development. It is only through a synthesis of the two holistic perspectives of evolutionary psychology and developmental systems theory that we will be able to understand the nature of human behavior.
