The Railways - Simon Bradley 2015-09-24

Sunday Times History Book of the Year 2015 Currently filming for BBC programme Full Steam Ahead Britain's railways have been a vital part of national life for nearly 200 years. Transforming lives and landscapes, they have left their mark on everything from timekeeping to tourism. As a self-contained world governed by distinctive rules and traditions, the network also exerts a fascination all its own. From the classical grandeur of Newcastle station to the ceaseless traffic of Clapham Junction, from the mysteries of Brunel's atmospheric railway to the lost routines of the great marshalling yards, Simon Bradley explores the world of Britain's railways, the evolution of the trains, and the changing experiences of passengers and workers. The Victorians' private compartments, railway rugs and footwarmers have made way for air-conditioned carriages with airline-type seating, but the railways remain a giant and diverse anthology of structures from every period, and parts of the system are the oldest in the world. Using fresh research, keen observation and a wealth of cultural references, Bradley weaves from this network a remarkable story of technological achievement, of architecture and engineering, of shifting social classes and gender relations, of safety and crime, of tourism and the changing world of work. The Railways shows us that to travel through Britain by train is to journey through time as well as space.

Transfer State - Peter Sloman 2019-10-30

The idea of a guaranteed minimum income has been central to British social policy debates for more than a century. Since the First World War, a variety of market economists, radical activists, and social reformers have emphasized the possibility of tackling poverty through direct cash transfers between the state and its citizens. As manufacturing employment has declined and wage inequality has grown since the 1970s, cash benefits and tax credits have become an important source of income for millions of working-age households, including many low-paid workers with children. The nature and purpose of these transfer payments, however, remain highly contested. Conservative and New Labour governments have used in-work benefits and conditionality requirements to 'activate' the unemployed and reinforce the incentives to take low-paid work - an approach which has reached its apogee in Universal Credit. By contrast, a growing number of campaigners have argued that the challenge of providing economic security in an age of automation would be better met by paying a Universal Basic Income to all citizens. Transfer State provides the first detailed history of guaranteed income proposals in modern Britain, which brings together intellectual history and archival research to show how the pursuit of an integrated tax and benefit system has shaped UK public policy since 1918. The result is a major new analysis of the role of cash transfers in the British welfare state which sets Universal Credit in a historical perspective and examines the cultural and political barriers to a Universal Basic Income.

The Fourth Industrial Revolution - Klaus Schwab 2017-01-03

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are

affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Economics and Climate Emergency - Barry Gills 2022-08-22

This book explores a series of connected themes focused on the role economics and other influential forms of theory and thinking have played in creating the current predicament and the scope for alternatives and how they might be framed. Thirty years have passed since the inception of the United Nations Framework Convention on Climate Change (UNFCCC) and the beginning of policy on climate change. Thirty wasted years. To most politicians, long-term collective interest has been denominated in meaningless units of time, a never and forever that has continually delayed action. From complacency has come potential disaster, and we are now living in a time of climate emergency and ecological breakdown. The next decade is a pivotal period requiring fundamental change. But numerous impediments remain. Continual material, energy and economic growth on a planetary scale are manifestly impossible, and yet economic theory takes these as a given and political leadership and policy seem unwilling to accept brute reality. Instead, they offer a series of implausible commitments and pledges rooted in technofixes, without addressing the fundamental drivers of the problems the world faces. The edited volume explores the issues and offers a variety of ways to think through the problems at hand, from postgrowth, degrowth and social ecological economics to policy assemblage and transversalism. The chapters in this book were originally published in the journal Globalizations.

In addition to covering the traditional principles of economics, the book also has sections which highlight the relationship with other business disciplines, including: globalisation, business strategy, Porter's five forces, the product life cycle, and business ethics. This book is ideal for undergraduate or postgraduate students doing a non-specialist one-semester economics course.

A Textbook of Cultural Economics - Ruth Towse 2010-01-07

What determines the price of a pop concert or an opera? Why does Hollywood dominate the film industry? Does illegal downloading damage the record industry? Does free entry to museums bring in more visitors? In A Textbook of Cultural Economics, one of the world's leading cultural economists shows how we can use the theories and methods of economics to answer these and a host of other questions concerning the arts (performing arts, visual arts and literature), heritage (museums and built heritage) and creative industries (the music, publishing and film industries, broadcasting). Using international examples and covering the

most up-to-date research, the book does not assume a prior knowledge of economics. It is ideally suited for students taking a course on the economics of the arts as part of an arts administration, business, management, or economics degree.

The Computer Revolution in Philosophy - Aaron Sloman 1978

Democracy Against Domination - K. Sabeel Rahman 2017

In 2008, the collapse of the US financial system plunged the economy into the worst economic downturn since the Great Depression. In its aftermath, the financial crisis pushed to the forefront fundamental moral and institutional questions about how we govern the modern economy. What are the values that economic policy ought to prioritize? What institutions do we trust to govern complex economic dynamics? Much of popular and academic debate revolves around two competing approaches to these fundamental questions: laissez-faire defenses of self-correcting and welfare-enhancing markets on the one hand, and managerialist turns to the role of insulated, expert regulation in mitigating risks and promoting growth on the other. In *Democracy Against Domination*, K. Sabeel Rahman offers an alternative vision for how we should govern the modern economy in a democratic society. Drawing on a rich tradition of economic reform rooted in the thought and reform politics of early twentieth century progressives like John Dewey and Louis Brandeis, Rahman argues that the fundamental moral challenge of economic governance today is two-fold: first, to counteract the threats of economic domination whether in the form of corporate power or inequitable markets; and second, to do so by expanding the capacity of citizens themselves to exercise real political power in economic policymaking. This normative framework in turn suggests a very different way of understanding and addressing major economic governance issues of the post-crisis era, from the challenge of too-big-to-fail financial firms, to the dangers of regulatory capture and regulatory reform.

The Knowledge Illusion - Steven Sloman 2017-03-14

"The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom." —Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don't even know how a pen or a toilet works. How have we achieved so much despite understanding so little? Cognitive scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We're constantly drawing on information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact—and usually we don't even realize we're doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

Steal this Dream - Larry Sloman 1998

In the tradition of "Edie, the oral biography of Edie Sedgwick, "Steal This Dream is a captivating roller-coaster ride of an oral biography of Abbie Hoffman and the sixties, told by over two hundred of those who demonstrated, protested, and lived through those tumultuous years. Abbie Hoffman was at the center of most of the political and social tumult of the sixties, as a participant, disciple, instigator, leader, and dissident. He helped fight for civil rights in the South, organized on behalf of the poor in New York City, was a leader of the Flower Power generation in Haight-Ashbury in San Francisco, and was one of the most

vocal and visible counterculture guerrillas in the fight against the war in Vietnam. He created chaos on Wall Street, experimented with psychedelics, hashish, speed, cocaine, and free love, planned be-ins, attempted to "levitate" the Pentagon, helped to disrupt the Democratic Convention in Chicago, and was one of the forces behind Woodstock. A genius at exploiting and manipulating the media, and through them, inspiring a counterculture across the country and throughout the decade, Abbie was the most famous hippie and revolutionary of modern times. A fast-paced and utterly compelling oral history told by the people Abbie worked with, for, and against--from Tom Hayden and Jerry Rubin to Paul Krassner and Timothy Leary--"Steal This Dream is the finest social history of the sixties yet written.

The Changing World of the Trainer - Martyn Sloman 2007-05-07

The 'Changing World of the Trainer' considers how the human resource development professional should undertake his or her role in today's organization. It offers a new framework which reflects the business reality of the modern world. This practical work proceeds through a series of tools, checklists, questionnaires and instruments and presents an extensive series of illustrative case studies, drawn from organizations throughout the world. The book argues that the problems that trainers face are fundamentally the same. Their objective is to put a process in place to ensure that employees are able to acquire the knowledge and skill required by the organization. The acquisition of individual and collective knowledge and skills is not the primary purpose of the organization - skills are a means to the end of profitability and service delivery. Hence training is a derived or secondary activity. In the world economy a global model of human resource development is emerging. In one form or another, organizations are seeking to develop what are known as high performance working practices. What the customer requires drives business processes: staff must be recruited, retained and motivated. Effective learning, training and development is now essential. This does not mean the end of the traditional off-the-job training course. There are many occasions, and these are illustrated within the book, when a training course delivered by a subject-matter expert is an effective way of promoting the organization's objectives through individual learning. However, it is increasingly evident that the range of interventions undertaken by the trainer extends far beyond the design and delivery of the training course. There has been a huge increase in coaching and in ways of promoting group learning. Action learning is undergoing a resurgence. Generally there has been a growth of non-directive forms of intervention; a shift in emphasis from instruction to the facilitation of the learning process. Many practitioners are proceeding effectively to redefine their roles in a variety of different ways. However, it is now time to offer a formal expression of the new training and learning role. Martyn Sloman is highly respected internationally within the field of learning and development, with experience as a practitioner in the public, private and voluntary sectors. The WEIRDest People in the World - Joseph Henrich 2020-09-08

A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets,

occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

Climate-Challenged Society - John S. Dryzek 2013-10-24

This book is an original, accessible, and thought-provoking introduction to the severe and broad-ranging challenges that climate change presents and how societies can respond. It synthesizes and deploys cutting-edge scholarship on the range of social, economic, political, and philosophical issues surrounding climate change. The treatment is introductory, but the book is written "with attitude", for nobody has yet charted in coherent, integrative, and effective fashion a way to move societies beyond their current paralysis as they face the challenges of climate change. The coverage begins with an examination of science, public opinion, and policy making, with special attention to organized climate change denial. The book then moves to economic analysis and its limits; different kinds of policies; climate justice; governance at all levels from the local to the global; and the challenge of an emerging "Anthropocene" in which the mostly unintended consequences of human action drive the earth system into a more chaotic and unstable era. The conclusion considers the prospects for fundamental transition in ideas, movements, economics, and governance.

Factfulness - Hans Rosling 2018-04-03

INSTANT NEW YORK TIMES BESTSELLER "One of the most important books I've ever read—an indispensable guide to thinking clearly about the world." – Bill Gates "Hans Rosling tells the story of 'the secret silent miracle of human progress' as only he can. But Factfulness does much more than that. It also explains why progress is so often secret and silent and teaches readers how to see it clearly." —Melinda Gates "Factfulness by Hans Rosling, an outstanding international public health expert, is a hopeful book about the potential for human progress when we work off facts rather than our inherent biases." - Former U.S. President Barack Obama Factfulness: The stress-reducing habit of only carrying opinions for which you have strong supporting facts. When asked simple questions about global trends—what percentage of the world's population live in poverty; why the world's population is increasing; how many girls finish school—we systematically get the answers wrong. So wrong that a chimpanzee choosing answers at random will consistently outguess teachers, journalists, Nobel laureates, and investment bankers. In Factfulness, Professor of International Health and global TED phenomenon Hans Rosling, together with his two long-time collaborators, Anna and Ola, offers a radical new explanation of why this happens. They reveal the ten instincts that distort our perspective—from our tendency to divide the world into two camps (usually some version of us and them) to the way we consume media (where fear rules) to how we perceive progress (believing that most things are getting worse). Our problem is that we don't know what we don't know, and even our guesses are informed by unconscious and predictable biases. It turns out that the world, for all its imperfections, is in a much better state than we might think. That doesn't mean there aren't real concerns. But when we worry about everything all the time instead of embracing a worldview based on facts, we can lose our ability to focus on the things that threaten us most. Inspiring and revelatory, filled with lively anecdotes and moving stories, Factfulness is an urgent and essential book that will change the way you see the world and empower you to respond to the crises and opportunities of the future. --- "This book is my last battle in my life-long mission to fight devastating ignorance...Previously I armed myself with huge data sets, eye-opening software, an energetic learning style and a Swedish bayonet for sword-swallowing. It wasn't enough. But I hope this book will be." Hans Rosling, February 2017.

Neuroeconomics - Paul W. Glimcher 2013-08-13

In the years since it first published, Neuroeconomics: Decision Making and the Brain has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition, a nearly complete revision of this landmark book, will set a new standard. This new edition features five sections designed to serve as both classroom-friendly introductions to each of the major subareas in neuroeconomics, and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies—each written by leading experts—lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, "The Neural Mechanisms for Choice, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices.

The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all chapters, making core issues in economics, psychology, and neuroscience accessible to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general. Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning, risk, inter-temporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics—www.neuroeconomics.org Full-color presentation throughout with numerous carefully selected illustrations to highlight key concepts
