**Pathologie des Auges** - G.O.H. Naumann 2013-03-08

Entscheidendes Anliegen dieses Standardwerkes ist die klinisch-pathologische Korrelation: Bereits klinisch sichtbare, strukturelle Veränderungen am Auge werden den entsprechenden mikroskopischen Schnitten in über 1000 Abbildungen und schematischen Skizzen gegenübergestellt. Außerdem wird die Differentialdiagnose definierter Befunde in 188 Tabellen erläutert. Nach einleitenden Kapiteln über die Anatomie und einer Übersicht des Untersuchungsmaterials in einem ophthalmologischen Labor folgen Kapitel über Mißbildungen, intraokulare Entzündungen, Folgen von Trauma und chirurgischen Eingriffen sowie Glaukome. Anschließend werden die einzelnen Gewebeabschnitte systematisch abgehandelt: Konjunktiva, Kornea, Uvea, Linse, Glaskörper, Retina, Optikus und cursorisch die okulären Adnexe. Die Voraussetzungen für die Leitstrukturen und Elemente des ophthalmoskopischen Bildes werden getrennt erörtert. Abschließend folgt eine Übersicht der morphologischen Augenveränderungen bei Allgemeinerkrankungen und als Therapie-Folge. 4500 Literaturstellen erleichtern den Einstieg in vorhandenes Schrifttum.

**Pathology of the Eye** - G.O.H. Naumann 2012-12-06

It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology. Not since the three volumes of the Henke-Lubarsch handbook appeared forty years ago has anything like this come on the market. This book represents a comprehensive, thorough and up-to-date clinically oriented textbook on ocular pathology. We are all

indebted to the senior author, who is now professor of ophthalmology at the University of Erlangen, who presents us here with the fruit of decades of industrious endeavors. We also have to be grateful to the American ophthalmic pathologist, Dr. David Apple, who, as one of the main collaborators of the German edition, has now provided us with the English translation. The book has a twofold purpose: First, it is meant to be a source of instruction for ophthalmologists and pathologists. For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures. Most valuable from a didactic point of view are the colored schematic drawings and the many tables. These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology.
