Towards Very Large Knowledge Bases -
N. J. I. Mars 1995

In the early days of artificial intelligence it was widely believed that powerful computers would, in the future, enable mankind to solve many real-world problems through the use of very general inference procedures and very little domain-specific

knowledge. With the benefit of hindsight, this view can now be called quite naive. The field of expert systems, which developed during the early 1970s, embraced the paradigm that Knowledge is Power - even very fast computers require very large amounts of very specific knowledge to solve non-trivial problems. Thus, the field of large knowledge bases has emerged.

This book proposes an innovative approach to general nouns. General nouns are defined as high-frequency nouns that are characterized by their textual functions. Although the concept is motivated by Halliday & Hasan (1976), the corpus

theoretical approach adopted in the present study is fundamentally different and set in a linguistic framework that prioritizes lexis. The study investigates 20 nouns that are very frequent in mainstream English, as represented by the Bank of English Corpus. The corpus-driven approach to the data involves a critical discussion of descriptive tools, such as patterns, semantic prosodies, and primings of lexical items, and the concept of? local textual functions? is put forward to characterize the functions of the nouns in texts. The study not only suggests a characterization of general nouns, but also stresses that functions of lexical items and properties of texts are closely linked. This link requires new ways of describing language.

Multilingual Individuals and Multilingual Societies - Kurt Braunmüller 2012

The 25 contributions of this volume represent a selection from the more than

120 papers originally presented at the International Conference on "Multilingual Individuals and Multilingual Societies" (MIMS), held in Hamburg (October 2010) and organized by the Collaborative Research Center "Multilingualism" after twelve years of successful research. It presents a panorama of contemporary research in multilingualism covering three fields of investigation: (1) the simultaneous and successive acquisition of more than one language, including language attrition in multilingual settings, (2) historical aspects of multilingualism and variance, and (3) multilingual communication. The papers cover a vast variety of linguistic phenomena including morphology, syntax, segmental and prosodic phonology as well as discourse production and language use, taking both individual and societal aspects of multilingualism into account. The languages addressed include numerous

Romance, Slavic and Germanic varieties as well as Welsh, Hungarian, Turkish, and several South African autochthonous languages.

Structuring the Lexicon - Dagmar Divjak
2010

Structuring the Lexicon presents a cognitively realistic, clustered model for near-synonymy that explicitly addresses the question of how semantic knowledge is distributed along the continuum from grammar to lexicon. Talking to Learn - Pauline Jones

2018-10-09

This book examines the place of talk in learning and the role of such talk in literacy education. It builds on a strong tradition of research into the role of talk in constructing curriculum knowledge, the relationship between talking and thinking, and the significance of extended, in-depth dialogic interaction in classroom talk. However, it differs from tradition with its emphasis on the need to make the role of language in learning more visible and more explicit. This book places particular emphasis on the relationship between dialogic pedagogy and language-based approaches to learning. Contributions range from discussions on educational linguistics and dialogic pedagogy as complementary perspectives to needs of students for whom English is an additional language or dialect. This volume was originally published as a special issue of Research Papers in Education.

Discourse Description - William C. Mann
1992-01-01

Discourse Description presents in one convenient volume a variety of approaches to text description that have been proposed in the linguistic literature in the last decade or so. The book is organized to make it easy to understand and compare the various approaches. Since all of the researchers are analyzing the same text, their differences are readily seen. The text they analyze is a letter, mailed in bulk by a Washington-based lobbying organization which is supported by contributions from donors. Far from simply informing the readers, the letter seeks to appeal to them on many levels, intellectual, emotional, and financial.

It is a fascinating study in how texts do their work. Discourse Description is expected to serve both as a research document and as a case textbook for graduate and undergraduate courses in discourse and text analysis, as well as a resource for text analysts.

Mass Terms: Some Philosophical Problems - Francis Jeffrey Pelletier 1979-03-31

I. MASS TERMS, COUNT TERMS, AND SORTAL TERMS Central examples of mass terms are easy to come by. 'Water', 'smoke', 'gold', etc. , differ in their syntactic, semantic, and pragmatic properties from count terms such as 'man', 'star', 'wastebasket', etc. Syntactically, it seems, mass terms do, but singular count terms do not, admit the quantifier phrases 'much', 'an amount of', 'a little', etc. The typical indefinite article for them is 'some' (unstressed)!, and this article cannot be used with singular count terms. Count terms, but not mass terms, use the quantifiers 'each', 'every', 'some', 'few', 'many'; and they use 'a(n)' as the indefinite article. They can, unlike the mass terms, take numerals as prefixes. Mass terms seem not to have a plural. Semantically,

philosophers have characterized count terms as denoting (classes of?) individual objects, whereas what mass terms denote are cumulative and disjunctive. (That is, a mass term is supposed to be true of any sum of things (stuff) it is true of, and true of any part of anything of which it is true). Pragmatically, it seems that speakers use count terms when they wish to refer to individual objects, or when they wish to reidentify a particular already introduced into discourse. Given a "space appropriate" to a count term C, it makes sense to ask how many C's there are in that space.

Describing and Explaining Grammar and Vocabulary in ELT - Dilin Liu 2013-08-15

Language description plays an important role in language learning/teaching because it often determines what specific language forms, features, and usages are taught and how. A good understanding of language description is vital for language teachers and material writers and should constitute an important part of their knowledge. This

book provides a balanced treatment of both theory and practice. It focuses on some of the most important and challenging grammar and vocabulary usage questions. Using these questions as examples, it shows how theory can inform practice and how grammar and vocabulary description and explanation can be made more effective and engaging. Part I describes and evaluates the key linguistic theories on language description and teaching. Part II discusses and gives specific examples of how challenging grammar and vocabulary issues can be more effectively described and explained; each chapter focuses on one or more specific grammar and vocabulary. An annotated list of useful free online resources (online corpora and websites) for grammar and vocabulary learning and teaching, and a glossary provide helpful information.

Psycholinguistics (PLE):

Psycholinguistics) - Alan Garnham

2013-10-23

Originally published in 1985, this title was an important new teaching text at the time. Alan Garnham focuses on current theories about the central cognitive aspects of language understanding, and attempts to reflect the emergence of cognitive science, an inter-disciplinary approach to the study of language and other cognitive processes. As well as describing psychological studies, the text includes ideas from linguistics, artificial intelligence, the philosophy of language and formal logic. Some introductory remarks on the study of language understanding precede a discussion of word recognition and the computation of the syntactic structure of sentences. The central part of the book is concerned with questions about meaning, the mental representation of word meanings, and text comprehension. The

final two chapters address questions of how the parts of the language processing system operate together, and how language production is related to comprehension. Rather than attempting an exhaustive discussion of empirical research on his chosen topics, the author gives the reader the flavour of linguistic arguments. In particular, Psycholinguistics attempts to indicate the problems and also the possibilities of relating experimental data to theories of language processing.

Psycholinguistics will still be useful reading on courses in psycholinguistics, language and thought, and cognitive psychology.
