Evolution of Nervous Systems - 2016-11-23

Evolution of Nervous Systems, Second Edition is a unique, major reference which offers the gold standard for those interested both in evolution and nervous systems. All biology only makes sense when seen in the light of evolution, and this is especially true for the nervous system. All animals

have nervous systems that mediate their behaviors, many of them species specific, yet these nervous systems all evolved from the simple nervous system of a common ancestor. To understand these nervous systems, we need to know how they vary and how this variation emerged in evolution. In the first edition of this important reference work, over 100 distinguished neuroscientists assembled the current state-of-the-art knowledge on how nervous systems have evolved throughout the animal kingdom. This second edition remains rich in detail and broad in scope, outlining the changes in brain and nervous system organization that occurred from the first invertebrates and vertebrates, to present day fishes, reptiles, birds, mammals, and especially primates, including humans. The book also includes wholly new content, fully updating the chapters in the previous edition and offering brand new content on current developments in the field. Each of the volumes has

been carefully restructured to offer expanded coverage of non-mammalian taxa, mammals, primates, and the human nervous system. The basic principles of brain evolution are discussed, as are mechanisms of change. The reader can select from chapters on highly specific topics or those that provide an overview of current thinking and approaches, making this an indispensable work for students and researchers alike. Presents a broad range of topics, ranging from genetic control of development in invertebrates, to human cognition, offering a one-stop resource for the evolution of nervous systems throughout the animal kingdom. Incorporates the expertise of over 100 outstanding investigators who provide their conclusions in the context of the latest experimental results. Presents areas of disagreement and consensus views that provide a holistic view of the subjects under discussion.

Criminal and Citizen in Modern Mexico - Robert

Buffington 2000-01-01
Criminal and Citizen in Modern Mexico explores elite notions of crime and criminality from the late eighteenth to the early twentieth century. In Mexico

these notions represented contested areas of the social terrain, places where generalized ideas about criminality transcended the individual criminal act to intersect with larger issues of class, race, gender, and sexuality. It was at this intersection that modern Mexican society bared its soul. Attitudes toward race amalgamation and indios, lower-class lifestyles and *lâperos*, women and sexual deviance, all influenced perceptions of criminality and ultimately determined the fundamental issue of citizenship: who belonged and who did not. The liberal discourse of toleration and human rights, the positivist discourse of order and progress, the revolutionary discourse of social justice and integration sought in turn to disguise the exclusions of modern Mexican society behind a veil of criminality?to proscribe as criminal those activities that criminologists, penologists, and anthropologists clearly linked to marginalized social groups. This

book attempts to lift that veil and to gaze, like Josä Guadalupe Posada, at the grinning calavera that it shields.

Fundamentos de psicobiología (ed. revisada) - Ana Moreno Alcázar 2016-05-16

El cerebro regula la mayoría de las actividades del organismo. Nos convierte en lo que somos, subyace a nuestras emociones, a la resolución de problemas, a la inteligencia, al pensamiento, a capacidades tan humanas como el lenguaje, la atención o los mecanismos de aprendizaje y memoria. Las personas mostramos una gran diversidad de conductas, habilidades y temperamentos que parecen hacernos únicos. Esa diversidad tiene su origen en el carácter indudablemente particular que posee el cerebro de cada persona. Interaccionar con el entorno en el que vivimos transforma nuestra conducta y nuestra forma de pensar, al modificar diferentes aspectos de nuestro cerebro. La psicobiología es la disciplina cuyo objeto de estudio es la

conducta y la cognición, pero atendiendo a las bases biológicas subyacentes; fundamentalmente poniendo el centro de interés en cómo el cerebro recibe, integra, procesa la información y envía diferentes señales para regular múltiples funciones en el organismo. El libro está dirigido a un amplio y diverso público (estudiantes, académicos y profesionales de esta disciplina) que quiera tener información actualizada, así como a personas que sin ser especialistas en el tema, tengan interés o curiosidad en conocer y aproximarse desde el ámbito científico o cotidiano a comprender la conducta y la cognición humanas a partir del estudio de sus bases biológicas. *Spanish-English Chemical and Medical Dictionary* - Morris Goldberg 1952

Fanaticism and Conflict in the Modern Age - Matthew Hughes 2004-12-15

What is fanaticism? Is the term at all useful? After all, one person's fanatic is another's freedom fighter. This new book probes these key questions of the twenty first century. It details how throughout history

there have been fanatics eager to pursue their religious, political or personal agendas. Fanaticism has fuelled many of the conflicts of the twentieth century, in particular the theatres of combat of the Second World War. More recently, religious fanaticism has bedevilled affairs in the Middle East and elsewhere. Is fanaticism becoming more fanatical in the new millennium? As the events of 11 September 2001 prove, fanaticism, however it is defined, continues to dominate international affairs. The volume covers the nature and philosophy of fanaticism, the connection between political ideology and fanaticism, and the relationship between fanaticism and war in the contemporary era. To illustrate these themes, the volume presents a broad range of case studies including the Dervishes in the Sudan in the 1890s, fanaticism in the context of the Pacific war, 1937-45, the 12th SS Hitler Jugend Division in action in Normandy in 1944, the German army on the

Eastern Front, and terrorism and guerrilla war after 1945.

Making Food in Local and Global Contexts - Atsushi Nobayashi 2022-06-21

This book is a collection of research focusing on the anthropological aspects of how food is made in modern society from both global and local perspectives. Modern food consumed in any society is created in a variety of natural and cultural environments. There is a "food democracy" in which how we procure and share food can be an indicator of our participation in society, while food nurtured in particular climates and land can be transmitted to the outside world owing to the influence of tourism and the global

economy, a phenomenon that is recognized on a global scale as exemplified by the UNESCO Intangible Cultural Heritage. In other words, food is an aspect of both culture and civilization. Anthropological approaches are used to reveal the humanistic aspects of food, highlighting the strength and individuality of regional and ethnic foods in global civilizations. The book is a compilation of results from sessions of the international symposium "Making Food in Human and Natural History", which took place on March 18 and 19, 2019, in Osaka, Japan. *Estudio diacrónico y sincrónico del objeto indirecto en el español peninsular y de América* - Silvia Becerra Bascuñán 2006

TEXT IN SPANISH. This study contributes to the understanding of synchronic and diachronic aspects of the grammatical relation of the indirect object in Spanish as it appears on the Iberian Peninsula as well as in Latin America. The following aspects have not been investigated until now: Firstly, the

grammaticalisation of the cross-reference (from the 21th century to the 21st century) -- the double representation of the indirect object in the light of Henning Andersen's theory of 'drift'. Secondly, an adaptation of the idea of grammatical relations in functional linguistics as it is presented by Simon Dik and Michael Heselund. All kinds of genres are being studied.

Students at Risk of School Failure - José Jesús Gázquez 2018-10-18

The main objective of this Research Topic is to determine the conditions that place students at risk of school failure, identifying student and context variables. In spite of the fact that there is currently little doubt about how one learns and how to teach, in some countries of the "developed world," there is still there is a high rate of school failure. Although the term "school failure" is a very complex construct, insofar as its causes, consequences, and development, from the field of educational psychology, the

construct “student engagement” has recently gained special interest in an attempt to deal with the serious problem of school failure. School engagement builds on the anatomy of the students’ involvement in school and describes their feelings, behaviors, and thoughts about their school experiences. So, engagement is an important component of students’ school experience, with a close relationship to achievement and school failure. Children who self-set academic goals, attend school regularly and on time, behave well in class, complete their homework, and study at home are likely to interact adequately with the school social and physical environments and perform well in school. In contrast, children who miss school are more likely to display disruptive behaviors in class, miss homework frequently, exhibit violent behaviors on the playground, fail subjects, be retained and, if the behaviors persist, quit school. Moreover, engagement should also be considered as an

important school outcome, eliciting more or less supportive reactions from educators. For example, children who display school-engaged behaviors are likely to receive motivational and instructional support from their teachers. The opposite may also be true. But what makes student engage more or less? The relevant literature indicates that personal variables (e.g., sensory, motor, neurodevelopmental, cognitive, motivational, emotional, behavior problems, learning difficulties, addictions), social and/or cultural variables (e.g., negative family conditions, child abuse, cultural deprivation, ethnic conditions, immigration), or school variables (e.g., coexistence at school, bullying, cyberbullying) may concurrently hinder engagement, preventing the student from acquiring the learnings in the same conditions as the rest of the classmates.
