Dr. Arthur Spohn - Jane Clements Monday 2018-09-12

In this first comprehensive biography of Dr. Arthur Edward Spohn, authors Jane Clements Monday, Frances Brannen Vick, and Charles W. Monday Jr., MD, illuminate the remarkable nineteenth-century story of a trailblazing physician who helped to modernize the practice of medicine in Texas. Arthur Spohn was unusually innovative for the time and exceptionally dedicated to improving medical care. Among his many surgical innovations was the development of a specialized tourniquet for "bloodless operations" that was later adopted as a field instrument by militaries throughout the world. To this day, he holds the world record for the removal of the largest tumor—328 pounds—from a patient who fully recovered. Recognizing the need for modern medical care in South Texas, Spohn, with the help of Alice King, raised funds to open the first hospital in Corpus Christi. Today, his name and institutional legacy live on in the region through the Christus Spohn Health System, the largest hospital system in South Texas. This biography of a medical pioneer recreates for readers the medical, regional, and family worlds in which Spohn moved, making it an important contribution not only to the history of South Texas but also to the history of modern medicine.

A New Breed - Dr. John Hall 2014-09-02

You won't be able to stop reading once you pick up Dr. John Hall's terrifying account, *A New Breed: Satellite Terrorism in America*. Dr. Hall's narration is based on true-life events and what you'll find will open your eyes to a completely new form of terrorism. Dr. Hall has treated numerous patients who have complained about voices in their heads, eventually being driven to a form of serious psychosis. In his book, he describes his relationship with his significant other, Mallory, a young, attractive woman with a bright future. Upon beginning a new profession, Mallory was suddenly struck down by unexplainable happenings: mind control, surveillance, stalking, and rape. Hall and others sacrificed themselves and their careers to bring her nightmare to an end. What happened to Mallory and what is happening to countless others? Hall's supposition is that we are faced with a type of terrorism that is unseen but just as deadly. Our government satellite surveillance systems are a new way for criminals to gain possession not only of our financial lives, but our most precious resource: Our minds. What can we do and who are these individuals who are trying to control the way the think, feel, act and what we do?

Healthcare, Quality Concerns and Competition Law - Theodosia Stavroulaki 2023-01-26

Market driven healthcare is massively divisive. Opponents argue that a competition approach to medical treatment negatively impacts on quality, while advocates point to increased efficiencies. This book casts a critical eye over both positions to show that the concerns over quality are in fact real. Taking a two part approach, it unveils the fault lines along which healthcare provision and the pursuit of quality would in certain cases clash. It then shows how competition authorities can only effectively assess competition concerns when they ask the fundamental question of how the concept of healthcare quality should be defined and factored into their decisions. Drawing on UK, US and EU examples, it explores antitrust and merger cases in hospital, medical and health insurance markets to give an accurate depiction of the reality and challenges of regulating competition in healthcare provision.

The Sensitives - Oliver Broudy 2020-07-14

A compelling exploration of the mysteries of environmental toxicity and the community of “sensitives”—people with powerful, puzzling symptoms resulting from exposure to chemicals, fragrances, and cell phone signals, that have no effect on “normals.” They call themselves “sensitives.” Over fifty million Americans endure a mysterious environmental illness that renders them allergic to chemicals. Innocuous staples from deodorant to garbage bags wreak havoc on sensitives. For them, the enemy is modernity itself. No one is born with EI. It often starts with a single toxic exposure. Then the symptoms hit: extreme fatigue, brain fog, muscle aches, inability to tolerate certain foods. With over 85,000 chemicals in the environment, danger lurks around every corner. Largely ignored by the medical establishment and dismissed by family and friends, sensitives often resort to odd ersatz remedies, like lining their walls with aluminum foil or hanging mail on a clothesline for days so it can “off-gas” before they open it. Broudy encounters Brian Welsh, a prominent figure in the EI community, and quickly becomes fascinated by his plight. When Brian goes missing, Broudy travels with James, an eager, trusting sensitive to find Brian, investigate this disease, and delve into the intricate, ardent subculture that surrounds it. Their destination: Snowflake, the capital of the EI world. Located in eastern Arizona, it is a haven where sensitives can live openly without fear of toxins or the judgment of insensitive “normals.” While Broudy’s book is wry, pacey, and down-to-earth, it also dives deeply into compelling corners of medical and American history. He finds telling parallels between sensitives and their cultural forebears, from the Puritans to those refugees and dreamers who settled the West. Ousted from mainstream society, these latter-day exiles nonetheless shed bright light on the anxious, noxious world we all inhabit now.

Hormones, Health, and Happiness - Steven F. Hotze 2013

Do you want to maintain your health and energy level as you age? If so, then it is essential that you replenish your declining hormones. In *Hormones, Health, and Happiness*, Dr. Steven Hotze reveals how restoring hormones to optimal levels using natural, bioidentical hormones enables women and men to regain their vitality. Dr. Hotze discusses the frequently overlooked problem of hypothyroidism, which commonly affects women in midlife. Too often, women with all the signs of low thyroid are told that their blood results are normal. Find out why women should believe what their bodies are telling them rather than the results of a blood test. The conventional medical approach treats symptoms with “anti” drugs, such as antidepressants, antihistamines, antispasmodics, anti-arthritis, and others, rather than discovering and correcting the underlying problems of these symptoms. In *Hormones, Health, and Happiness*, Dr. Hotze discusses symptoms of women and men in midlife, which include fatigue, weight gain, headaches, depression, insomnia, hot flashes, joint and muscle pain, brain fog, loss of interest in sex, allergies, and recurrent infections, to name a few, and addresses their solutions. His comprehensive eight-point wellness program will help you strengthen your immune system, balance your hormones, and increase your energy

level. This program encompasses: • Treatment of low thyroid • Treatment of hormonal decline and imbalance • Treatment of adrenal fatigue • Treatment of yeast overgrowth • Treatment of airborne allergies • Treatment of food allergies • Vitamin and mineral supplementation • Nutritionally balanced eating program Dr. Hotze demonstrates how many health problems can be solved safely, effectively, and naturally without drugs. If you are sick and tired of being sick and tired, then it's time to take charge of your health and get your life back. By following Dr. Hotze's recommendations you can begin your journey down a life-long path of health and happiness.
