Strategies for Asia-Pacific Shipping - Jeff Hawkins 2019-07-30

This title was first published in 2000. This text focuses on one geographical and economical area - the Asia-Pacific region, on one type of decision makers - commercial shipowners, and on one type of business strategy - corporate level strategy, to show economic change and how organizations manage that change. This book discusses the challenges that shipowners face to take advantage of that growth. It also looks at the lack of information on strategic decision making that could assist the shipowners in taking advantage of the economic situation. The chapters cover the types of business

strategies available and how to select the criteria for selecting one of those strategies. *Shipping and Logistics Management* - Yuen Ha (Venus) Lun 2010-04-07

Shipping and Logistics Management serves to consolidate the knowledge its authors have acquired from being educators and observers of the shipping industry. The authors discuss global trends and strategies in the shipping business, looking at the role of logistics service providers and at how the use of information technology can help shipping operations. Shipping and Logistics Management also aims to answer several important questions in the shipping industry, including: what are the shipping cost structures?, what are the patterns of

sea transport? and how do companies in the shipping industry operate? An invaluable source of information for researchers and advanced, or graduate, students, *Shipping and Logistics Management* is also a useful reference for shipping practitioners and consultants.

The Drewry Monthly - 2004

International Maritime Transport - Heather Leggate 2004-08-02

The importance of the international maritime transport industry is difficult to

overstate. This new book presents an interdisciplinary approach from a wide range of internationally-based experts. International Maritime Transport represents a radical departure from previous works in its structure and approach. The section editors each discuss the state of the art in the opening chapter, before introducing a selection of works providing a wide-ranging analysis of the subject. Wide discretion of approach has provided literary freedom for individual opinion and analysis within the overall framework: this permits a level of innovation which is perhaps stifled by the more standardized model. Whilst each perspective can be seen as exclusive, together they form a comprehensive volume of issues in contemporary maritime transport. Topics covered include: ports as interfaces, logistics, manpower and skills, financial risk and opportunities, the regulatory framework. Each chapter

contains an introduction which explains the context of the chapter within the book and the contemporary state of the art. Under the editorship of maritime experts James McConville, Alfonso Morvillo and Heather Leggate, the book is sure to be of interest to students and academics working on maritime studies, as well as being useful to professionals and policy makers in the maritime industry.
