Hélène Metzger, Historian and Historiographer of the Sciences - Cristina Chimisso 2019-12-05

Is there something important to learn from the history of science about knowledge and the mind? Do habits and emotions play a significant role in science? To what extent do present concerns and knowledge distort our understanding of past texts and practices? These are crucial questions in current debates, but they are not new. This monograph evaluates the answers to these and other questions that Hélène Metzger (1889-1944) provided. Metzger, who was the leading historian of chemistry of her generation, left us unparalleled reflections on the theory, practice and aims of history writing. Despite her influence on subsequent generations of thinkers, including Thomas Kuhn, this is the first full-length monograph on her. Beginning with an overview of her life, and the challenges faced by a Jewish woman working within academia, the book goes on to discuss the most important themes of

her historiography, and her engagement with other disciplines, notably general history, philosophy, ethnology and religious studies. The book also explores both Metzger's immediate legacy and the relevance of her ideas for a host of current debates in science studies. The Appendices include four of her historiographical papers, translated into English for the first time.

Science and Civilization in Islam - Seyyed Hossein Nasr 1970

Physicists in Conflict - Neil A. Porter 1998-01-01

Dialogue in science is essential for progress. But when dialogue becomes conflict or further intensifies to persecution the situation is harmful not only to science, but also to the wider society in which science exists. This is true whether the conflict is internal, in the case of Boltzmann, or external, as with Galileo and Oppenheimer against the

The Spiritual Science of the Stars - Pete Stewart 2007-11-30

The profound influence of ancient cosmologies on our ideas about the human spirit • Shows how ancient myths contain a sophisticated understanding of our relationship to the cosmos, derived from thousands of years of observation of the night sky • Explains how ideas of the mind and spirit are still entwined with these ancient cosmologies despite the disruptive effects of modern astronomy • Reveals how ancient ideas and contemporary cosmology might be combined into a new model for spiritual meaning Thousands of years before the first written records, humans were turning to the night sky as a source of meaning for existence and their place within it. The conclusions drawn from these observations are embodied in stories from across the world known as Creation Myths. Contrary to the popular belief that these myths were meant to explain the origins of the universe, Pete Stewart shows that they were actually designed to create a harmony and order in the lives of humans that reflected, in their society and architecture, the ordered patterns they saw evidenced in the sky. These ancient myths also record, in the story of "the separation of Heaven and Earth," the discovery of a disastrous discord in this ancient harmony, which the mythmakers overcame by imagining a vastly expanded architecture, one in which the individual soul had a role to play in the evolution of the cosmos. Today science presents a similar challenge to our sense of meaning. Stewart explores how, by reexamining the myths of creation in this light, we can learn how contemporary cosmology might yield a new architecture for the spirit and how the ancient sense of being in the cosmos might be reconstructed for our age.

Anti-natural Framework – II & Its Consequences - Jamir Ahmed Choudhury 2019-07-09
This volume of Anti-natural Framework & Its Consequences is a conspiracy theory on how certain scientific findings/principles have been concealed from the world and how alternatives to each one of them have been projected to the world. A few examples of this are: The concealment of the Upright Rectangular Universe and Projection and propagation of the Universally Accepted Running and Moving Global Universe; the concealment of the Sirius Binary System [Two Horizons—West Horizon and East Horizon], Mercurial System [Two Hemispheres—Northern Hemisphere and Southern Hemisphere], and Existential Import of the Barrier between Equal and Opposite Natural Mechanisms [Solar System] and Projection and Propagation of the Universally Accepted Solar System as if Sirius Binary System—Mercurial System—Solar System.

Essential Difference - James Blachowicz 2012-08-02

Proposes a new way of understanding the nature of metaphysics, focusing on nonreductionist emergence theory, both in ancient and modern philosophy, as well as in contemporary philosophy of science. Is metaphysics possible? This book argues that the greatest threat to its viability derives from a self-destructive formalism. If what is essential to the nature of physical entities are the properties they have in common (as formalism holds), the inevitable result will be a reductionist collapse—leaving only “being” or physical “matter” or some other underlying ground. In *Essential Difference*, James Blachowicz first constructs a one-to-one historical parallel between the modern crisis surrounding formalism (Hume/Kant/Hegel) and the ancient version (Parmenides/Plato/Aristotle), focusing on the principles of differentiation and individuation that underlie Aristotle’s and Hegel’s antireductionist programs. He then proposes a contemporary metaphysical theory of emergence in the context of recent philosophy of science. This theory, founded on the principle of the nonderivability of actual states from possible states, holds that the differences among physical, biological, and mental

phenomena are essential to any metaphysics. *Essential Difference* is the only focused treatment of this problem and is itself essential for any understanding of the nature of metaphysics. James Blachowicz is Professor of Philosophy at Loyola University Chicago. He is the author of *Of Two Minds: The Nature of Inquiry*, also published by SUNY Press.

Galileo and the Church - Rivka Feldhay 1995-05-26

This book questions the traditional “grand narratives” of science and religion in the seventeenth-century. The known contradictions between the documents of Galileo’s “trials” are reread as expressions of the contradictory nature of the Counter Reformation Church. Looking back at the formative years of Tridentine Catholicism demystifies its monolithic and coercive tendencies. Being torn between different cultural orientations—the Dominicans’ and the Jesuits’—the Church was unable to crystallize a coherent attitude towards Galileo’s science.

Science and Technology in World History - James E. McClellan III 2008-02-01

The new edition reorganizes its treatment of Greek science and significantly expands its coverage of industrial civilization and contemporary science and technology with new and revised chapters devoted to applied science, the sociology and economics of science, globalization, and the technological systems that underpin everyday life.
