

Arthur S Veterinary Reproduction And Obstetrics

As recognized, adventure as competently as experience more or less lesson, amusement, as well as understanding can be gotten by just checking out a books **Arthur S Veterinary Reproduction And Obstetrics** furthermore it is not directly done, you could acknowledge even more in the region of this life, as regards the world.

We present you this proper as skillfully as simple pretentiousness to get those all. We manage to pay for Arthur S Veterinary Reproduction And Obstetrics and numerous book collections from fictions to scientific research in any way. in the midst of them is this Arthur S Veterinary Reproduction And Obstetrics that can be your partner.

Equine Reproduction - Angus O. McKinnon 2011-07-05

Now in a much-anticipated two-volume new edition, this gold-standard reference stands as the most comprehensive and authoritative text on equine reproduction. Serving theriogenologists, practitioners and breeders worldwide as a one-stop resource for the reproductive assessment and management of equine patients, *Equine Reproduction, Second Edition* provides detailed information on examination techniques, breeding procedures, pregnancy diagnosis and management, reproductive tract diseases and surgery, and foaling. A companion CD offers hundreds of images from the book in color. For the Second Edition, the stallion, mare and foal sections have been thoroughly updated and revised to include the latest information on every subject. New topics include discussion of nutritional and behavioral factors in the broodmare and stallion, parentage testing, fetal sexing and the health and management of older foals, weanlings and yearlings. Additionally, this outstanding Second Edition features a new section on assisted reproductive techniques, including detailed information on artificial insemination, in-vitro fertilization, embryo transfer and technology.

Bovine Medicine - Anthony H. Andrews 2008-04-15

Bovine Medicine provides practical and comprehensive information on cattle disease and production and is a key reference for all large animal vets. Since the first edition was published in 1991 there have been significant improvements in disease control and management of cattle. Almost all parts of the book have been updated and completely rewritten. There are new chapters on surgery, embryo transfer, artificial insemination, ethno-veterinary medicine and biosecurity, and a new consolidating chapter on the interaction between the animal, environment, management and disease. The previous edition has sold all over the world, and as a result of this a greater emphasis has been placed on conditions and their treatment in areas other than temperate regions. A new section entitled "Global Variation in Cattle Practice" has been included with contributors discussing bovine medicine practice in their part of the world. All in all this is an outstanding resource for any practising vet and an excellent reference for veterinary students.

Pediatric and Adolescent Gynecology - S. Jean Herriot Emans 2005

The #1 clinical reference on pediatric and adolescent gynecology is now in its updated Fifth Edition. Written by experts from The Children's Hospital in Boston and other leading medical centers, this handbook presents contemporary approaches to diagnosis and medical and surgical management of gynecologic problems in infants, children and adolescents. This edition features cutting-edge information on urology and complementary and alternative medicine and expanded coverage of surgical techniques for correcting structural abnormalities of the reproductive tract. More than 400 illustrations—including 8 pages of full-color plates—complement the text. The book also includes outstanding algorithms and tables and abundant case examples.

Index Veterinarius - 2007

Journal of the South African Veterinary Association - South African Veterinary Association 1988

Bovine Theriogenology, An Issue of Veterinary Clinics of North America: Food Animal Practice, E-Book - Robert L. Larson 2016-07-10

This issue of *Veterinary Clinics of North America: Food Animal Practice* focuses on Bovine Theriogenology. Article topics include: Reproductive systems for North American Beef Cattle Herds, Reproductive systems for North American Dairy Cattle Herds, Beef Heifer Development, Dairy Heifer Development, Evaluation of data obtained at pregnancy detection of beef herds, Synchronization and AI Strategies in Beef Herds, Synchronization and AI Strategies in Dairy Herds, Embryo Transfer, Management of reproductive disease in dairy cattle, Venereal Diseases of Cattle, Diagnosis and Control of Neosporosis, Management and Breeding Soundness Examination of Yearling Bulls, and more!

Veterinary Reproductive Ultrasonography - Wolfgang Kähn 2004-03-22

A guide to the reproductive problems facing the busy veterinary practitioner in every day practice. The pregnant and non-pregnant uterus, as well as pathologic changes of the reproductive system are described and explained. The book is superbly illustrated and covers all the important domestic large and small animals: dogs, cats, horses, cows, sheep, goats and pigs.

Bovine Reproduction - Richard M. Hopper 2021-04-30

Bovine Reproduction A complete resource for practical, authoritative information on all aspects of bovine theriogenology The newly revised Second Edition of *Bovine Reproduction* delivers a comprehensive overview of all major issues in bovine reproduction. Written by leading experts in the subject, the book is an indispensable reference for any veterinarian dealing with bovine fertility. *Bovine Reproduction* is divided into sections on the bull, the cow, the neonate, and assisted reproduction techniques. New chapters cover new gene manipulation technologies, managing problem donors, lameness, and more. Outdated and redundant information from the First Edition has been removed and replaced by coverage of new diseases, technologies, procedures, techniques, and approaches to fertility problems. A new companion website provides images and tables from the book in PowerPoint format. In addition to more than 675 full-color images, readers will also benefit from: A thorough discussion of the anatomy and physiology of the bull, including the endocrine and exocrine function of bovine testes and the thermoregulation of the testes An exploration of breeding and health management of bulls, including the evaluation of breeding soundness and ultrasound examination of the reproductive tract An examination of the anatomy, physiology, and the breeding and health management of cows, including fetal programming, the reproductive tract microbiome, and a section on obstetrics and reproductive surgery A review of the management of both critical care of the neonate and effective colostrum assessment and provision An introduction to assisted and advanced reproductive technologies A practical and comprehensive reference, *Bovine Reproduction* is a must-have purchase for bovine

practitioners, theriogenologists, animal scientists, veterinary students, and residents with an interest in cattle.

National Union Catalog - 1980

Includes entries for maps and atlases.

Current Therapy in Exotic Pet Practice - Mark Mitchell 2016-01-05

This brand-new, full-color reference is a foundational text for veterinarians and veterinary students learning about companion exotic animal diseases. Organized by body system, *Current Therapy in Exotic Pet Practice* walks students through the most relevant information concerning the diagnosis and treatment of exotic animals - including the most relevant information on anatomy, physical examination, diagnostic testing, disease conditions, therapeutics, epidemiology of diseases, and zoonoses. Topics such as captive care, current standards of care for all exotic species, veterinary clinical epidemiology, and the effective prevention and management of infectious diseases are also included. Expert guidance on treating various disease conditions provides authoritative support for veterinarians who are less experienced in companion exotic pet care. Renowned authors and editors carefully selected topics of real clinical importance. Detailed coverage on how to identify and treat diseases (from common to rare) helps alleviate apprehension a veterinarian may feel when treating an unfamiliar species. Includes the latest information from the current scientific literature and addresses hot topics associated with treating companion exotic animals today. Vivid full-color images demonstrate the unique anatomic and medical features of each group of animals covered.

Library of Congress Catalogs - Library of Congress 1979

Arthur's Veterinary Reproduction and Obstetrics - E-Book - David E. Noakes 2018-10-30

As the standard theriogenology text for veterinary students, *Veterinary Reproduction and Obstetrics* is also a great reference to keep post-graduation. The 10th edition of this book has been thoroughly updated to include normal reproduction and reproductive disorders, as well as diseases in the common and less common domestic species (dogs, cats, pigs, and horses as well as llamas, alpacas, and camels). This sorely needed information is vital for practicing in underdeveloped countries which lack the technology, equipment, and personnel offered in the U.S. With many international contributing authors, this one-of-a-kind text includes developments in reproductive biology and endocrinology from across the globe. Only textbook covering all major domestic mammalian species ensures you get consistent, authoritative advice on all species that experience challenges related to reproduction and obstetrics. Only book available that covers all aspects of theriogenology in all major domestic mammalian species recognizes the importance of species from every inch of the globe. A practical, clinical approach to the content provides you with the instruction you need to improve your clinical proficiency. Comparative aspects of theriogenology and obstetrics helps you to see beyond your species of immediate interest, and broaden your scope of knowledge and understanding of the discipline. Consistent leadership of David Noakes through nine previous editions makes this the most highly regarded text worldwide in this genre. NEW! Extensive coverage of less-common domestic species prepares you to work with these animals in developing countries where they're more common. NEW! Black and white images replaced with color pictures to optimize full-color design and demonstrate specific techniques. NEW! Additional international contributors provide you with a global, multi-faceted perspective on a variety of species.

Reproduction in Farm Animals - E. S. E. Hafez 2013-05-13
When you're looking for a comprehensive and reliable

text on large animal reproduction, look no further! the seventh edition of this classic text is geared for the undergraduate student in Agricultural Sciences and Veterinary Medicine. In response to reader feedback, Dr. Hafez has streamlined and edited the entire text to remove all repetitious and nonessential material. That means you'll learn more in fewer pages. Plus the seventh editing is filled with features that help you grasp the concepts of reproduction in farm animals so you'll perform better on exams and in practice: condensed and simplified tables, so they're easier to consult an easy-to-scan glossary at the end of the book an expanded appendix, which includes graphic illustrations of assisted reproduction technology Plus, you'll find valuable NEW COVERAGE on all these topics: Equine Reproduction: expanded information reflecting today's knowledge Llamas (NEW CHAPTER) Micromanipulation of Gametes and In Vitro Fertilization (NEW CHAPTER!) Reach for the text that's revised with the undergraduate in mind: the seventh edition of Hafez's *Reproduction in Farm Animals*.

Current Therapy in Large Animal Theriogenology - E-Book - Robert S. Youngquist 2006-11-23

An essential resource for both students and practitioners, this comprehensive text provides practical, up-to-date information about normal reproduction and reproductive disorders in horses, cattle, small ruminants, swine, llamas, and other livestock. Featuring contributions from experts in the field, each section is devoted to a different large animal species and begins with a review of the clinically relevant aspects of the reproductive anatomy and physiology of both males and females. Key topics include the evaluation of breeding soundness, pregnancy diagnosis, diagnosis and treatment of infertility, abortion, obstetrics, surgery of the reproductive tract, care of neonates, and the latest reproductive technology. Includes coverage of all large animal species. All sections provide a review of clinically pertinent reproductive physiology and anatomy of males and females of each species. Complete coverage of the most current reproductive technology, including embryo transfer, estrous synchronization, and artificial insemination. A new section on alternative farming that addresses reproduction in bison, elk, and deer. New to the equine section: stallion management, infertility, and breeding soundness evaluation. New to the bovine section: estrous cycle synchronization, reproductive biotechnology, ultrasonographic determination of fetal gender, heifer development, and diagnosis of abortion. New to the porcine section: artificial insemination, boar/stud management, diseases of postpartum period, and infectious disease control. New to the llama section: infectious disease and nutrition.

Handbook of Veterinary Pharmacology - Walter H. Hsu 2013-04-25

Handbook of Veterinary Pharmacology is a clear and concise guide to pharmacology concepts and commonly used veterinary drugs. Providing a succinct overview of veterinary pharmacology, this book presents information in a user-friendly outline format to allow quick access to practical drug information. With chapters covering the basic principles, specific drugs, interactions, and legal considerations, *Handbook of Veterinary Pharmacology* offers up-to-date information on basic and clinical veterinary pharmacology. As an aid to student comprehension, simple line drawings depict the mechanisms of action and study questions with explanations are included at the end of each chapter. Appendices on withdrawal times for drugs in production animals and drug dosages in domestic species are a valuable tool, allowing quick decisions on drug therapy. *Handbook of Veterinary Pharmacology* is an indispensable text for veterinary students and practitioners.

Success in Artificial Insemination - Alemayehu Lemma

2013-01-09

Artificial insemination has long been the primary tool towards genetic improvement in many domestic animals. Knowledge based decision are increasingly becoming important in this industry. Scientific publications are having greater role in the contribution of research outputs towards an efficient utilization reproductive phenomenon. This book on improving the success of AI through improving the quality of semen and related diagnostics is just one for interested readers.

Arthur's Veterinary Reproduction and Obstetrics - Geoffrey H. Arthur 2001

This new eighth edition of the classic text covers all aspects of reproduction and obstetrics in all common domestic species, as well as several less common species. This is the only book to cover the full range of domestic animals and now also includes less common species such as llamas and alpacas. Several more common, frequently encountered small animal species such as guinea pigs and rabbits are discussed for the first time in this edition.

Not of Woman Born - Renate Blumenfeld-Kosinski 2019-03-15

"Not of woman born, the Fortunate, the Unborn"—the terms designating those born by Caesarean section in medieval and Renaissance Europe were mysterious and ambiguous. Examining representations of Caesarean birth in legend and art and tracing its history in medical writing, Renate Blumenfeld-Kosinski addresses the web of religious, ethical, and cultural questions concerning abdominal delivery in the Middle Ages and the Renaissance. Not of Woman Born increases our understanding of the history of the medical profession, of medical iconography, and of ideas surrounding "unnatural" childbirth. Blumenfeld-Kosinski compares texts and visual images in order to trace the evolution of Caesarean birth as it was perceived by the main actors involved—pregnant women, medical practitioners, and artistic or literary interpreters. Bringing together medical treatises and texts as well as hitherto unexplored primary sources such as manuscript illuminations, she provides a fresh perspective on attitudes toward pregnancy and birth in the Middle Ages and the Renaissance; the meaning and consequences of medieval medicine for women as both patients and practitioners, and the professionalization of medicine. She discusses writings on Caesarean birth from the twelfth and thirteenth centuries, when Church Councils ordered midwives to perform the operation if a mother died during childbirth in order that the child might be baptized; to the fourteenth century, when the first medical text, Bernard of Gordon's *Lilium medicinae*, mentioned the operation; up to the gradual replacement of midwives by male surgeons in the fifteenth and sixteenth centuries. Not of Woman Born offers the first close analysis of Franois Rousset's 1581 treatise on the operation as an example of sixteenth-century medical discourse. It also considers the ambiguous nature of Caesarean birth, drawing on accounts of such miraculous examples as the birth of the Antichrist. An appendix reviews the complex etymological history of the term "Caesarean section." Richly interdisciplinary, Not of Woman Born will enliven discussions of the controversial issues surrounding Caesarean delivery today. Medical, social, and cultural historians interested in the Middle Ages and the Renaissance, historians, literary scholars, midwives, obstetricians, nurses, and others concerned with women's history will want to read it.

Reproductive Pathology of Domestic Mammals - Mark McEntee 2012-12-02

This book evolved from a series of lectures and laboratories given by Dr. Kenneth McEntee to students at Cornell University, the University of Illinois, and Tufts University and is based on tissues from over 20,000 cases of reproductive disease in the

International Registry of Reproductive Pathology, founded by Dr. McEntee. Dr. McEntee brings into sharp focus what is known of reproductive pathology in North America and abroad. His book will be an invaluable text and reference for those working on the diagnosis, prevention, and treatment of reproductive failures of all kinds. The only comprehensive text on reproductive pathology of domestic mammals Based on pathologic examination of more than 20,000 cases of reproductive disease Covers clinical aspects of disease and associated lesions Extensive reference list includes citations in twelve languages

Practical Atlas of Ruminant and Camelid Reproductive Ultrasonography - Luc DesCôteaux 2009-09-24

Practical Atlas of Ruminant and Camelid Reproductive Ultrasonography is a practical, fully referenced, image-based guide to the essential concepts of reproductive ultrasound in domesticated ruminants and camelids. Providing information to enable practitioners to incorporate ultrasound service into their practices, the book also includes more specialized information for advanced techniques such as fetal sexing, embryo transfer, color Doppler, and others. Practical Atlas of Ruminant and Camelid Reproductive Ultrasonography is a must-have reference for ruminant and camelid practitioners, instructors, and students.

Bibliography of Reproduction - 1976

Reproduction In The Dog A Tropical Approach - Jovi Otite 2015-10-30

Dog breeding has gained tremendous awareness over the last decade. In some countries it is a source of employment for many and a means of poverty alleviation. The canine industry is growing tremendously and dogs are transported across borders all year round. As a result of this fast growing industry, the treatment given to dogs keeps improving as man's awareness increases. However, majority of the literature available to dog breeders and enthusiasts are of temperate origin and as a result, information available to the tropical breeder is limited. Raising dogs in the tropics is different from the temperate regions. The outcome of inadequate information affects the management of our canine friends. This affects the reproductive potential of dogs raised in the tropics. The environment which we give our dogs reflects on the dog's ability to exhibit its full genetic makeup. Hence, dogs might appear sterile, obese, underweight, or malnourished depending on its environment. This book, *Reproduction in the Dog: A Tropical Approach*, addresses the problems associated with dog breeding in the tropics and gives authentic information to the breeder, veterinarian, animal scientist or dog enthusiast. It covers all the reader needs to know about breeding, reproduction, artificial insemination, semen collection, handling and storage, cloning, feed composition, housing, care of dogs and lots more.

Veterinary Reproduction and Obstetrics - Geoffrey Herbert Arthur 1977

The oestrous cycle and its controls, The development of the conceptus, Pregnancy and its detection in the mare, Pregnancy and its detection in the cow, Pregnancy diagnosis in the sow, ewe and bitch, Anomalies of development of the conceptus, Prolapse of the vagina, Parturition, The care of parturient animals and the newborn:the puerperium, Dytocia:general considerations, Maternal dystocia, Fetal dystocia:aetiology and incidence, The approach to an obstetrical case, Manipulative delivery per vaginam:farm animals and the bitch, Dystocia due to fetal oversize, Dystocia due to defects of position or presentation, Dystocia due to twins or monstrosities, Injuries and diseases incidental to parturition, The caesarean operation, Caesarean operations in the bitch and cat, Retention of the fetal membranes, Postparturient prolapse of the uterus,

Infertility in the cow: general, anatomical and functional, Infectious forms of infertility in cattle, The veterinary control of herd infertility, Sheep infertility, Infertility in the mare, Swine infertility, Infertility in the bitch and cat, The normal sexual apparatus of male animals, Reproductive abnormalities of male animals, Artificial insemination.

Veterinary Pathophysiology - Robert H. Dunlop 2004-03-05

A common goal of human and veterinary medicine is to prevent and cure disease. To reach this goal, there must be a greater investment in the pathophysiology of diseases. Simply put, reductionist methodology fails to answer all of the questions. Pathophysiology represents a new approach to understanding the nature of disease processes, an approach already being embraced in human medicine. By integrating the basic sciences with pathology and the clinical sciences, Veterinary Pathophysiology bridges a significant and widening gulf in the veterinary professional curriculum. The aim of this trailblazing text is to be scholarly—yet practical—with a focus on the recognition and prevention of early dysfunction. In contrast to modern clinical veterinary medicine, which has focused progressively on the prescription of medications for individual symptoms and signs of disease, this text gives attention to understanding the functional changes that accompany disease. To offset over reliance on pharmacotherapy, Veterinary Pathophysiology offers insight into the interaction of the functional components of the mammalian body and their reaction not only to disease, but also to the risk of imbalances introduced by dietary and therapeutic manipulation. Veterinary Pathophysiology will supplement existing textbooks in general or introductory pathology, and veterinary internal medicine, by introducing a new framework for thinking about the nature of disease. The integrated problem-based approach of this book addresses the changing needs of veterinary college curricula, and will be a key resource book for problem-based approaches to learning. Veterinary Pathophysiology is an invaluable text for the practicing veterinarian, as well as veterinary students and instructors in general pathology, pathogenic microbiology, parasitology and immunology, physiology, neurobiology, oncology, toxicology, and pharmacology. This unique text offers students and clinicians the most comprehensive introduction to understanding the interactions between organs and functional systems that underlie infectious and metabolic diseases. With chapter contributions from 25 international authors, this title is the definitive text and reference in veterinary pathophysiology. It belongs on the desk of every veterinary student, and in the library of every instructor or clinician interested in a deeper understanding of animal diseases.

Equids--zebras, Asses, and Horses - Patricia D. Moehlman 2002

The new Equid Action Plan provides current knowledge on the biology, ecology and conservation status of wild zebras, asses, and horses. It specifies what information is lacking, and prioritizes needed conservation actions. The Action Plan also provides chapters on equid taxonomy, genetics, reproductive biology, and population dynamics. These chapters highlight unsolved issues of taxonomy and genetics. They also provide information and insight into the special demographic and genetic challenges of managing small populations. The chapter on disease provides a review of documented equine disease and epidemiology and focuses on priorities for equid conservation health. The final chapter deals with the importance of developing an assessment methodology that explicitly considers the role of equids in ecosystems and the ecological processes that are necessary for ecosystem viability. The approach of combining ecological field studies and ecosystem modeling should prove useful for the scientific management and

conservation of wild equids worldwide. These chapters provide research and conservation practitioners with new information and paradigms.

Reproduction in Domestic Animals - Perry T. Cupps 1991-02-20

A unique feature of this book is the focus on large, domestic animals. Previous editions were considered the "Bible" of reproductive physiology. It covers basic, large animal reproductive physiology, provides species-specific information and is suitable as a textbook for upper-division courses.

Large Animal Internal Medicine - E-Book - Bradford P. Smith 2019-05-21

NEW! Global conditions of importance are covered, including those previously not discussed, that exist in Europe, Central and South America, Australia, and New Zealand. NEW! Coverage of emerging and re-emerging diseases includes the new pathogen discovery. NEW! Assessment of vaccination status and susceptibility to infection discusses how antibody titers can predict protection for some pathogens. NEW! Description of epigenetics and metagenomics provides detailed coverage of these emerging areas of interest. NEW! Table of zoonoses obtained from large animals includes symptoms and disinfection needs. NEW! Coverage of genetic disorders, Hydrocephalus in Friesians and Pulmonary hypoplasia with Anasarca in Dexter cattle help you to treat these disorders. NEW! Extensively updated content clarifies the latest research and clinical findings on the West Nile Virus, therapeutic drug monitoring, muscle disorders, GI microbiota, the genetic basis for Immune-mediated myositis in Quarter Horses, discoveries in antimicrobial drugs, anthelmintic, and vaccines, and more!

Clinical Examination of Farm Animals - Peter Jackson 2008-04-15

Clinical examination is a fundamental part of the process of veterinary diagnosis. Without a proficient clinical examination and an accurate diagnosis it is unlikely that the treatment, control, prognosis and welfare of animals will be optimised. This book will assist veterinary students in their understanding of farm animal clinical examination and act as a quick reference for clinicians who are called upon to examine an unfamiliar species. It will also provide a more detailed account for experienced clinicians in their continuing professional development. The authors provide a simple, explicit and reliable method of examining cattle, sheep, pigs and goats of all ages in the search for diagnostic information.

Blaming Mothers - Linda C. Fentiman 2017-03-14

Présentation de l'éditeur : "In the past several decades, medicine, the media, and popular culture have focused on mothers as the primary source of health risk for their children, even though American children are healthier than ever. The American legal system both reflects and reinforces this conception of risk. This book explores how this occurs by looking at unconscious psychological processes, including the ways in which we perceive risk, which shape the actions of key legal decisionmakers, including prosecutors, judges, and jurors. These psychological processes inevitably distort the way that ostensibly neutral legal principles are applied in ways that are biased against mothers. The book shows how assertions that mothers and mothers-to-be have "risked" their children's health play out in practice. Pregnant women, women who do or do not breastfeed, and mothers whose children are injured or killed by the mother's abusive male partner end up facing civil lawsuits and criminal prosecution. The book also illustrates how America's resistance to the precautionary principle has led to an epidemic of children poisoned by lead. Vaccination is the only area in which parents are permitted to opt out of medically recommended health care for their children. The book

explores the role of "choice" in children's health and how it is applied unevenly to mothers and others, including manufacturers of toxic products. The book ends with recommendations for real improvement in children's health."

Applied Veterinary Gynaecology and Obstetrics - Pradeep Kumar 2015-08-30

Preface Acknowledgments 1. Study of female genitalia in slaughter house specimens 2. Comparative anatomy of female reproductive tracts 3. Per-rectal palpation of female genital organs 4. Oestrus detection in cattle and buffalo 5. Behavioural signs of oestrus in mare, ewe, doe and bitch 6. Detection of oestrus in bitch by vaginal cytology 7. Gynaecological examination of vagina 8. Technique of intra-uterine therapy 9. Collection of genital discharge 10. Examination of cervico-vaginal mucus sample 11. External and per-rectal pregnancy diagnosis in cattle/ buffalo 12. Early pregnancy diagnosis in cattle by "Milk-Ejection Test" 13. Differential diagnosis of pregnancy in bovine 14. Pregnancy diagnosis in small ruminants 15. Biological and chemical methods of pregnancy diagnosis 16. Care of the postpartum dam 17. Care of newborn 18. Pelvices of different domestic animals 19. Pelvimetry of domestic animals 20. Presentation, position and posture of foetus 21. Caudal epidural anaesthesia 22. Uses of obstetrical instruments 23. An approach to a case of dystocia 24. Evidence of foetal life 25. Vaginal delivery by using mutation and force traction technique 26. Techniques of foetotomy 27. Techniques of caesarean section in farm animals 28. Diagnosis and management of uterine torsion in farm animals 29. Diagnosis and therapeutic management of anoestrus cow 30. Diagnosis and therapeutic management of cystic ovarian degeneration 31. Diagnosis and therapeutic management of repeat breeder cows 32. Principles of antimicrobials therapy 33. Diagnosis and therapeutic management of post-partum infections in bovines 34. Diagnosis and therapeutic management of endometritis in bovines 35. Diagnosis and therapeutic management of septic puerperal metritis 36. Diagnosis and therapeutic management of pyometra 37. Diagnosis and therapeutic management of retention of placenta 38. Diagnosis and therapeutic management of vaginal prolapse in in bovines 39. Diagnosis and therapeutic management of prolapse of uterus in bovines 40. Diagnosis and therapeutic management of foetal mummification 41. Diagnosis and therapeutic management of foetal maceration 42. Diagnosis and therapeutic management of hydramnios and hydrallantois 43. Artificial induction of lactation in infertile bovine 44. Hormonal drugs acting on the reproductive system 45. Homoeopathy in female reproductive disorders 46. Drugs commonly used in bovine reproductive disorders GLOSSARY APPENDICES INDEX

University of Glasgow Calendar - University of Glasgow 1965

Danforth's Obstetrics and Gynecology - Ronald S. Gibbs 2008

A core reference for residents and practitioners for more than 40 years, this volume has been thoroughly revised and reorganized to provide complete, authoritative coverage of the modern clinical practice of obstetrics and gynecology.

Tropical Veterinarian - 1992

Subject Catalog - Library of Congress

Estrogens and Antiestrogens II - Michael Oettel 2012-12-06

For many years, Springer has been publishing an impressive series of textbooks of pharmacology which have set standards in medical science. Surprisingly, an

extensive overview of the current state of the art in research on estrogens and anti estrogens was still lacking. The present two volumes on estrogens and anti estrogens provide a comprehensive review of a field of research in which remarkable progress has been made over the past few years. New insights into the mechanisms of steroid hormone action resulted in a tremendous number of publications from which new principles of preventive and therapeutic applications of estrogens and anti estrogens emerged. Although various electronic data bases provide easy access to this copious information, there was a clear necessity for a monograph-style textbook which assesses and summarizes current knowledge in this rapidly expanding field of research. It should be noted, however, that, due to this dynamic development, it is barely possible to comprehensively update every aspect of basic and clinical knowledge on estrogens and antiestrogens. Thus, the intention of the editors was to provide the reader with an overview of the "classic" and most recently explored areas of research and stimulate future interests in basic and applied endocrinology. Estrogens were among the first steroid hormones described in the scientific literature. Since they were first isolated, since the chemical, synthetic and pharmacological characterization of naturally occurring estrogens and, later on, of orally active derivatives, estrogen research has produced continuously hallmark results in reproductive endocrinology worldwide.

The Maternal Fetal Interface - Anthony Carter 1998

The 29 papers contained in this volume look closely at various aspects of what is termed, "The Maternal-Fetal Interface," as it relates to the latest research in placental science. A substantial section of the book is devoted to the troublesome question of vertical transmission of infectious agents: namely, the HIV-1 virus. However, other sections of the volume examine related issues such as drug and toxin transfer across the term placenta and the diversity of placental types and how this can affect a placenta's effectiveness as a barrier. Anthony Carter is at the University of Odense, Denmark Vibeke Dantzer is at the University of Copenhagen, Denmark Thomas Jansson is at the University of Gothenburg, Sweden

Bulletin of the Veterinary Institute in Puławy - 2009

National Library of Medicine Current Catalog - National Library of Medicine (U.S.) 1971

Current Catalog - National Library of Medicine (U.S.) First multi-year cumulation covers six years: 1965-70.

Reproduction in Cattle - Peter J. H. Ball 2008-04-15 Cattle play a fundamental role in animal agriculture throughout the world. They not only provide us with a vital food source, but they also provide us with fertilizer and fuel. Keeping reproduction levels at an optimum level is therefore essential, but this is often a complicated process, especially with modern, high yielding cows. Written in a practical and user-friendly style, this book aims to help the reader understand cattle reproduction by explaining the underlying physiology of the reproductive process and the role and importance of pharmacology and technology, and showing how management techniques can improve reproductive efficiency. This edition includes: Recent research findings on the physiology of the oestrous cycle and its control; New techniques for monitoring and manipulating reproduction, including pregnancy diagnosis and embryo transfer; Advice on identifying common infertility problems and how to prevent and treat them. *Reproduction Cattle 3e* is essential reading for veterinary and agricultural students, as well as veterinarians and farmers involved in cattle reproduction.
