The Museum of Intangible Things - Wendy Wunder
2014-04-10

Loyalty. Envy. Obligation. Dreams. Disappointment. Fear. Negligence. Coping. Elation. Lust. Nature. Freedom. Heartbreak. Insouciance. Audacity. Gluttony. Belief. God. Karma. Knowing what you want (there is probably a French word for it). Saying Yes. Destiny. Truth. Devotion. Forgiveness. Life. Happiness (ever after). Hannah and Zoe haven't had much in their lives, but they've always had each other. So when Zoe tells Hannah she needs to get out of their down-and-out New Jersey town, they pile into Hannah's beat-up old Le Mans and head west, putting everything—their deadbeat parents, their disappointing love lives, their inevitable enrollment at community college—behind them. As they chase storms and make new friends, Zoe tells Hannah she wants more for her. She wants her to live bigger, dream grander, aim higher. And so Zoe begins teaching Hannah all about life's intangible things, concepts sadly

missing from her existence—things like audacity, insouciance, karma, and even happiness. An unforgettable read from the acclaimed author of *The Probability of Miracles*, *The Museum of Intangible Things* sparkles with the humor and heartbreak of true friendship and first love.

Honey-Comb of Praises - Celia C. Tillman 2016-09-30
This little book of poems, praises, prayers, and speeches has been gleaned from my personal experience with God through the reading of his Divine Word. It is my prayer, however, that all who read this little book may be encouraged to explore and read the Holy Book (Bible). The Bible is like sweetness from the honey comb, which is nourishment for the sin-sick soul. How sweet are thy words unto my taste! Yea, sweeter than

honey to my mouth. Through thy precepts I get understanding: therefore I hate every false way (Psalm 119: 103104).

And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

Information and Communications for Development 2018 - World Bank 2018-11-08

The Information and Communications for Development series looks in depth at how information and communications technologies are affecting economic growth in developing countries. This new report, the fourth in the series, examines the topic of data-driven development, or how better information makes for better policies. The objective is to assist developing-country

firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data. We are undoubtedly experiencing a data revolution in which our ability to generate, process, and utilize information has been magnified many times over by the machines that we increasingly rely upon. This report is about how the data revolution is changing the behavior of governments, individuals, and firms and how these changes affect the nature of development: economic, social, and cultural. How can governments extract value from data to improve service delivery in the same way that private companies have learned to do for profit? Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life? Can developing-country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better? Though the report is aimed primarily at government policy makers, it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects. For private sector firms, particularly those in developing countries, the report suggests how they might expand their markets and improve their competitive edge. For development professionals, the report provides guidance on how they might use data more creatively to tackle long-standing global challenges, such as eliminating extreme poverty, promoting shared prosperity, or mitigating the effects of climate change. The report's chapters explore different themes associated with the supply of data, the technology underlying it, and the demand for it. An

overview chapter focuses on government use of data and presentation of definitions. Part I of the report then looks at the “supply side” of the data sector, with chapters on data connectivity and capacity (where data comes from, how it is stored, and where it goes) and data technology (specifically big data analytics and artificial intelligence) and how this is contributing to development. Part II looks at the sector’s “demand side,” with a chapter on people’s use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness. Part III brings together the policy implications for developing-country stakeholders, with a chapter considering government policies for data, including data protection and privacy. A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index (DAI), a composite indicator introduced in the 2016 World Development Report: Digital Dividends.

Investing in Our Future - Buzz Aldrin 2018-07-15

Having the desire, ability, and belief in yourself to innovate beyond what past generations ever imagined possible, explore ground none has ever walked on, and live and work in ways no one has ever lived and worked-- these skills may not only increase the next generation's chances for success in the new century, in an employability and globally competitive sense. If Stephen Hawking and others are correct, they may be necessary to ensure our survival. *Investing in Our Future: Preparing the Next Generation to Occupy Mars* speaks to the need to cultivate new innovators and explorers whose dreams will move us forward, and whose travels will likely take us back to the moon and beyond. Its threefold purpose is: To reignite our passion to be limitless, ever-curious problem solvers, To foster a STEM-literate citizenry to innovate in ways we cannot yet imagine, and; To frame plans for leveraging what we know to enable the next generation to visit and possibly live and thrive on Mars. In this book, the authors deliver a compelling, succinct, and timely vision for recasting our approach to K-12 education to prepare a changing world for a successful future.

Finite Element Procedures - Klaus-Jürgen Bathe 1996

BASIC APPROACH: Comprehensive -- this text explores the "full range" of finite element methods used in engineering practice for actual applications in computer-aided design. It provides not only an introduction to finite element methods and the

commonality in the various techniques, but explores state-of-the-art methods as well -- with a focus on what are deemed to become "classical techniques" -- procedures that will be "standard and authoritative" for finite element analysis for years to come. FEATURES: presents in sufficient depth and breadth elementary concepts AND advanced techniques in statics, dynamics, solids, fluids, linear and nonlinear analysis. emphasizes both the physical and mathematical characteristics of procedures. presents some important mathematical conditions on finite element procedures. contains an abundance of worked-out examples and various complete program listings. includes many exercises/projects that often require the use of a computer program.

The Biopolitics of Gender - Jemima Repo 2015-10-05

Michel Foucault identified sexuality as one of the defining biopolitical technologies of the nineteenth and twentieth centuries. As Jemima Repo argues in this book, "gender" has come to be the major sexual signifier of the mid-twentieth and early twenty-first century. In fact, in this historical excavation of the biopolitical significance of the term, she argues that it could not have emerged at any other time. Repo shows that gender is not originally a feminist term, but emerged from the study of intersex and transsexual persons in the fields of sexology and psychology in the 1950s and 1960s. Prior to the 1950s gender was used to refer to various types of any number of phenomena - sometimes sex, but not necessarily. Its only regular usage was in linguistics, where it was used to classify nouns as masculine, feminine, or neuter. In the mid-twentieth century, gender shifted from being a nominator of types to designating the sexual order of things. As with

sexuality in the Victorian period, over the last sixty years, the notion of gender has become an entire field of knowledge. Feminists famously took up the term in the 1970s to challenge biological determinism, and in government, "women" have been replaced by "gender" in policy-making processes that aim to advance equality between women and men. Gender has also become a key variable in social scientific surveys of different socio-political phenomena like voting, representation, employment, salaries, and parental leave decisions. The *Biopolitics of Gender* analyzes the strategies and tactics of power involved in the use of "gender" in sexology and psychology, and subsequently its reversal and counter-deployment by feminists in the 1970s and 1980s. It critiques the emergence of gender in demographic science and the implications of this genealogy for feminist theory and politics today. Drawing on a wide variety of historical and contemporary sources, the book makes a major theoretical argument about gender as a historically specific apparatus of biopower and calls into question the emancipatory potential of the category in feminist theory and politics.

Virtual Serial Port Cookbook - Joe Pardue 2007

This is a cookbook for communicating between a PC and a Microcontroller using the FTDI FT232R USB UART IC, and has lots of software and hardware examples. The code is in C# and Visual Basic Express allowing you to build Graphical User Interfaces and add Serial Port functions to create communications programs. Part 1 - Serial Port

via USB Made Almost Easy -- In the first section you will learn the basics of serial communications using a USB UART bridge. You will further learn to write a simple terminal program in C# and Visual Basic Express .NET. Part 2 - PC to Microcontroller Conversations -- In the second section you will build on what you have learned and get into more details about GUI programming, using the SerialPort class, and some useful software tools such as XML. You will bring it all together by building a Developer Terminal, which will have most of the bells and whistles that you would want for communicating between a PC and a microcontroller. You will end this section with some neat hardware experiments. Part 3 - The FTDI FT232R -- In the final section you will chuck the serial port paradigm and communicate directly with the FT232R. You will learn how to use the Smiley Micros port of the FTDI D2XX driver, you will do some more hardware experiments bit-banging the BBUSB pins, and finally you will build a software programmer for the FT232R.

Third Generation Mobile Communication Systems - Ramjee Prasad 2000

Get a clear, complete debriefing on the current status of the third generation radio interface technology now being standardized by the international body 3GPP. This timely new work, written by Europe's leading mobile communications researchers from manufacturing, operators, and academia, gives you a thorough explanation of the basic principles of multiple access technologies, including receiver algorithms, coding, and modulation, to help you stay up-to-date with the development of third generation systems. Much of the research presented here originated in the FRAMES (Future Radio Wideband Multiple Access System) Project, which was partly funded by the European Commission. It served as the basis for ETSI's decision to adopt W-CDMA/TD-CDMA as the air interface standard for third generation systems, as well as for the actual specification work in 3GPP.
