Using a contextualized competency framework to develop rehabilitation programmes and their curricula - 2021-02-03

This guide, Using a contextualized competency framework to develop rehabilitation programmes and their curricula complements both the Rehabilitation Competency Framework (RCF) and Adapting the WHO Rehabilitation Competency Framework to a specific context. It proposes a methodology for developing a rehabilitation education and training programme and curriculum that can be used to support competencybased education (see Figure 1). The phases and steps detailed (described in the box below) are relevant to those of any profession or specialization, either developing new rehabilitation programmes, or revising curricula within existing rehabilitation programmes. In addition to outlining the process of programme development, the methodology describes how competencies and activities modelled from the RCF can be used to generate learning objectives, and how these can be positioned in a

comprehensive curriculum. It is important to note that whereas “competency-based education” is used in this guide because it is the normative term, the RCF differentiates between competencies and activities, and includes both (see Table 2).

Physical Therapy for Children - E-Book - Robert J. Palisano 2014-04-25

Used as both a core textbook in PT programs and as a clinical reference, *Physical Therapy for Children, 4th Edition*, provides the essential information needed by PTs, both student and professional, when working with children. Like the previous bestselling editions, the 4th edition follows the practice pattern categories of the *Guide to Physical Therapist Practice* and uses the IFC model of the disabling process as it

presents up-to-date evidence-based coverage of treatment. In this latest edition, Suzann Campbell DeLapp, Robert J. Palisano, and Margo N. Orlin have added more case studies and video clips, additional chapters and Medline-linked references online, and Evidence to Practice boxes to make it easy to find and remember important information. Provides comprehensive foundational knowledge in decision making, screening, development, motor control, and motor learning, the impairments of body function and structure, and the PT management of pediatric disorders. Reflects a family-centered care model throughout to help you understand how to involve children and their caregivers in developing and implementing intervention plans. Emphasizes an evidence-based approach that incorporates the latest research for the best outcomes. Follows the practice pattern guidelines of the *Guide to Physical Therapist Practice, 2nd Edition* which sets the standard for physical therapy practice. Features the International Classification of Function, Disability, and Health (ICF) of the World Health Organization (WHO) as the model for the disabling process, emphasizing activity rather than functional limitations and participation rather than disability in keeping with the book's focus on prevention of disability. Provides extensive case studies that show the practical application of material covered in the text and are often accompanied by online video clips illustrating the condition and its management.
